

PRODUCT SPECIFICATION

Compact Electronics Controller

Model CEC-120

T-RexRoth Controls GmbH | Rev. A | Fictional demonstration document

1. Product Description

The CEC-120 is a compact electronic control unit intended for installation in industrial equipment. The unit consists of an assembled printed circuit board mounted inside an injection-moulded ABS enclosure. External connections are provided through two cable connectors. The enclosure is closed with a removable lid secured by six screws.

This document describes the product only. Detailed electrical design data is issued separately under the CEC-120 design record.

Figure 1 — CEC-120 product overview

2. Product Characteristics

Characteristic	Value
Product designation	CEC-120
Overall dimensions	120 × 80 × 35 mm
Approximate mass	250 g
Enclosure	Injection-moulded ABS
PCB	1 assembled PCB
External connectors	2
Enclosure fasteners	6 × M3 screws
Label	1 product identification label
Packaging	Individual cardboard carton
Nominal operating environment	Indoor industrial equipment

3. Product Structure

Item	Component	Qty
1	Lower ABS enclosure	1
2	Assembled PCB	1
3	Upper enclosure lid	1
4	M3 lid screw	6
5	Cable connector	2
6	Product identification label	1
7	Individual cardboard carton	1

Quantities refer to one finished CEC-120 unit.

4. Assembly Requirements

The following requirements apply to the finished product. They describe the required product condition, not the method by which it is produced.

- PCB shall be installed inside the lower enclosure.
- PCB orientation shall follow the mechanical locating features of the enclosure.
- Both external connectors shall be connected to the PCB.
- The enclosure lid shall be installed after internal assembly.
- The lid shall be secured using six M3 screws.
- All six screws shall be present after assembly.
- Product identification label shall be applied to the exterior of the enclosure.
- Finished product shall be placed in an individual cardboard carton.

5. Quality Requirements

Each finished unit shall satisfy the following acceptance criteria.

- Enclosure shall have no visible cracks or major cosmetic damage.
- Both external connectors shall be present and correctly seated.
- All six lid screws shall be present.
- Lid shall be correctly seated on the lower enclosure.
- Product identification label shall be present and readable.
- Finished unit shall undergo visual inspection before packaging.

6. Customer Production Requirements

The following figures are supplied by the customer as boundary conditions for the supply of the CEC-120.

Requirement	Value
Required production volume	1,900 finished units/day
Available production area	30 m × 18 m
Available production workforce	8 operators
Customer preference	Avoid purchasing unnecessary additional equipment where a feasible alternative exists.

No further production or process data is specified by the customer.

7. Document Status

TRR-CEC120-SPEC-001, Rev. A. Issued by T-RexRoth Controls GmbH for review.

Fictional demonstration material. T-RexRoth Controls GmbH is a fictional demonstration company and the CEC-120 Compact Electronics Controller is a fictional demonstration product. The company, the product, this document and every value it contains were invented for a software demonstration and describe no real company, product, facility or customer. Any resemblance to an existing organisation is unintended.
